MENU

1. Map shows the last GPS position, street view or satellite view (A), address, date/time of last location & GPS co-ordinates. Button (B) shows the device location - touch green icon to request latest GPS position, Button (C) is your phone location
2. Map History allows you to view map locations for the last 24hr locations or set a date/time
3. Add Geofence allows you to add a circle around a location so that you receive an alert whenever the locator crosses the circle, leaving or arriving
4. About User allows you to update email, login name & password. It shows your SIM card account, password & locator phone number. Always ensure there is pay-as-you-go \$ credit on the SIM card
5. Login remembers the account & password which can be changed in About User. Ensure App Notifications are set to allow for alert notifications
6. About Device describes the locator details including SIM number
